1. Overview

LuxInterventions brings together in one **central app** everything needed to manage property: technical jobs, tenants, rents, hotels, Airbnb, taxis, agencies, owners and accounting. Around the central app, each person gets their own app, with no password to remember: an **access code** is enough.

App	For whom	What it does
🏢 Central	You (manager)	Manage everything, create access for the other apps
🏠 Tenant space	Tenants	Repair requests, documents, rents, messages
🛠️ Team app	Technicians	Today's jobs, photos, signature, job done
🛎️ My stay	Hotel / Airbnb guests	Arrival, taxi, room, services, messages
🚕 Taxi	Taxi companies	Drivers, cars, rates, rides to accept
📣 Ads	Restaurants, bars (HORECA)	Adverts, menus, events inside the apps
🔑 Client central	Management companies, agencies, hotels as clients	Their own central, under licence

All data is **encrypted on the device** before it is sent: the server only keeps unreadable vaults.

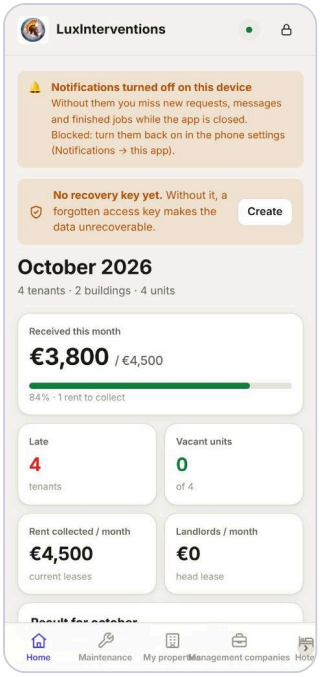

2. Getting started

1. Open the central app on your phone or computer and choose your **access key** (a long sentence only you know). Keep it somewhere safe: without it nobody — not even us — can read the data.
2. On a phone, add the central app to the home screen: it then opens like an app.
3. The central app is open on **one device at a time**. If you open it elsewhere, tap **"Take over"**: the other device is closed.
4. Choose the language in **Settings** (French, Italian, German, English, Portuguese, Spanish).

On a phone the menu is a bar at the bottom that scrolls sideways; on a computer it is on the left. The + buttons create a new record directly.

3. Home

Home sums up the day: open and urgent jobs, pending rents, hotel arrivals, unread messages. Tap a number to go straight to the matching list.

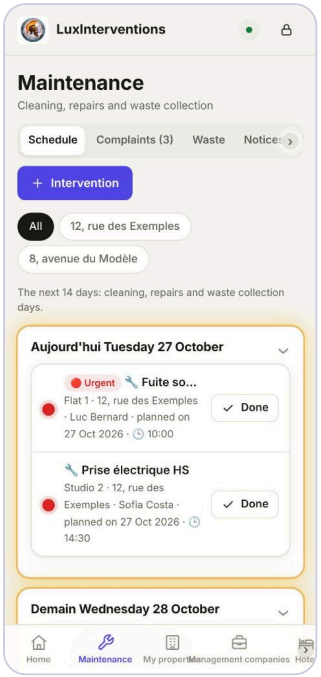

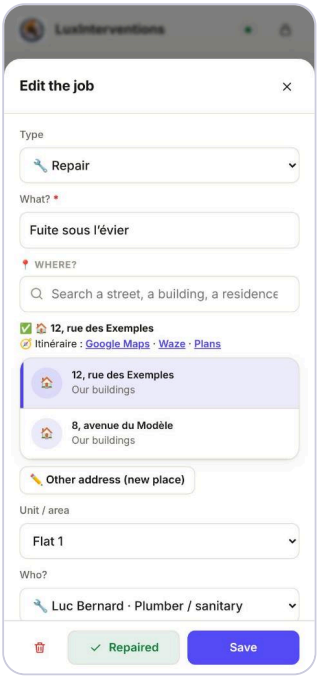

4. Maintenance and jobs

Maintenance gathers every job: the ones you create, the ones requested by tenants and the ones sent by your licensed clients.

1. Tap + to create a job: building, unit, description, urgency, photos.
2. Choose the **technician**: they receive it straight away in their Team app.
3. Follow the status: to do, in progress, done. The technician adds photos and a signature; you approve.

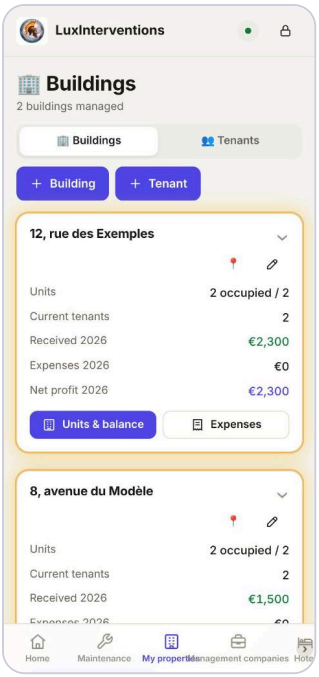

A technician's card holds contact details, trade and the **App** tab that creates their access code. The **Ranking** rewards the most active tenants ("tenant of the year").

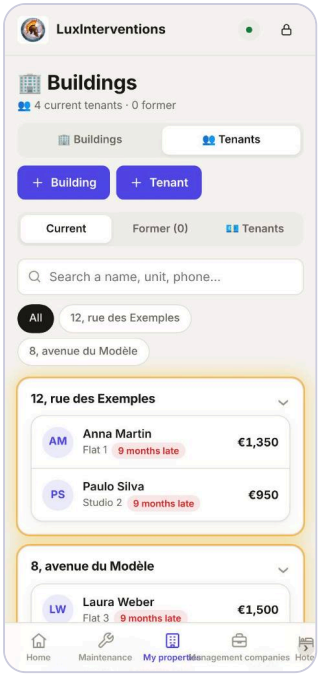

5. My properties

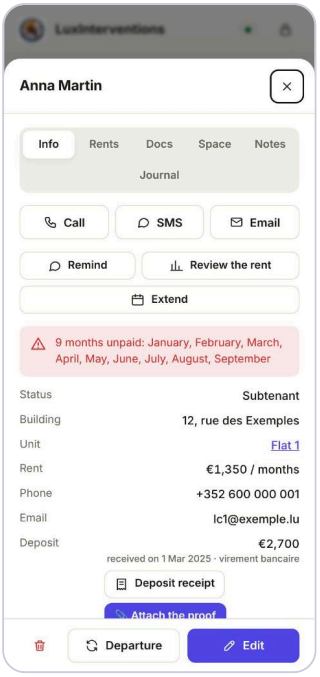

Here you record your buildings and their units (flats, studios, offices, garages…). Each unit can receive a tenant. The **Tenants** tabs are found in this section.

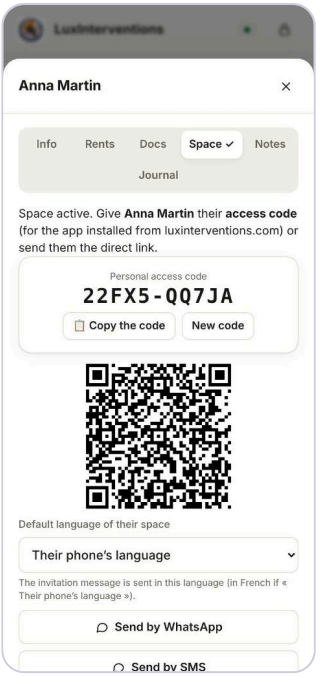

6. Tenants and their app

1. In **Tenants**, tap + and fill in the card: name, phone, unit, rent, charges, lease start.
2. Open the card, **Space** tab, and switch on the **tenant space**: an access code appears.
3. Send the link and the code to the tenant (WhatsApp, SMS, e-mail). They open the app, type the code, and that's it.
4. If the tenant loses the code, open the **Space** tab again and create a **new code**: the old one stops working.

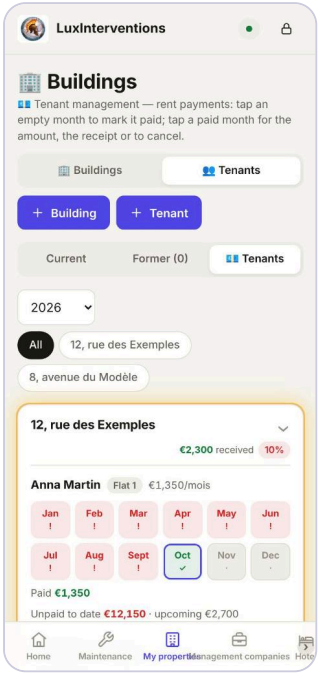

7. Rents

The rents view shows, month by month, rents expected, paid and late. Record a payment with one tap; the tenant finds the receipts in their app.

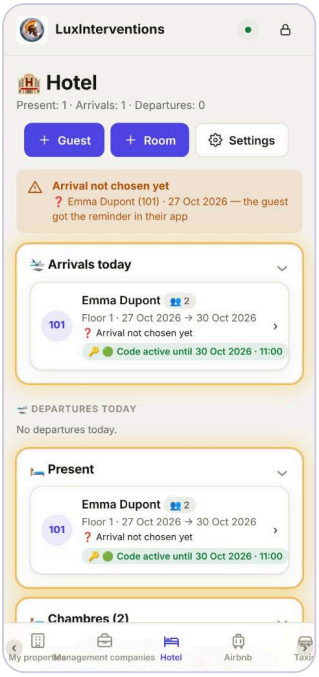

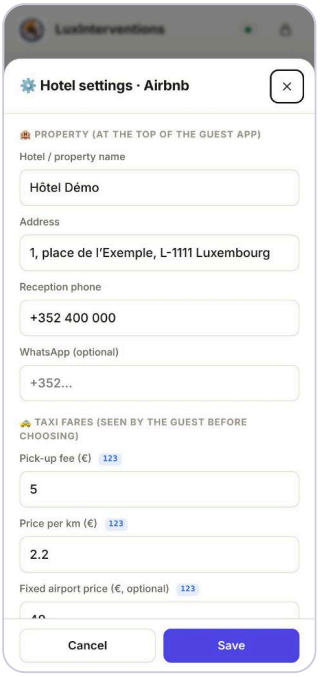

8. Hotel

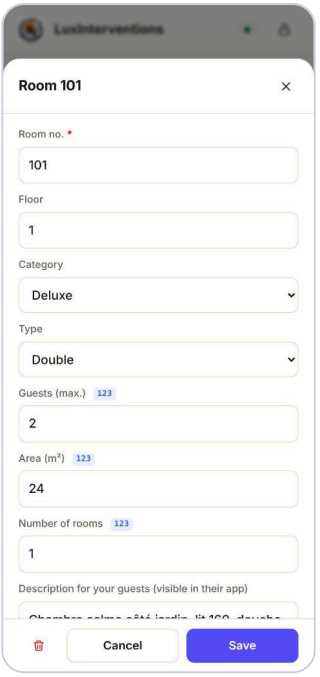

The **Hotel** section manages rooms and guests.

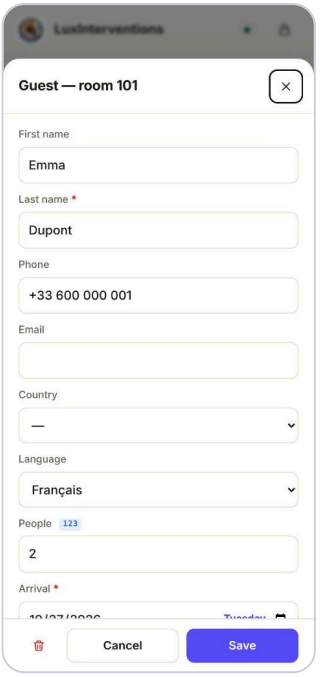

1. **Hotel settings**: name, address, services, menu as PDF.

2. **Rooms**: number, floor, category, type, number of people, m², description and **check-in inventory** with photos.
3. **Guest**: name, country (with flag), dates, room, meal plan, preferences and allergies, up to 7 photos. Saving creates a **code** for the **My stay** app.
4. At departure, do the guest's **check-out inventory**.

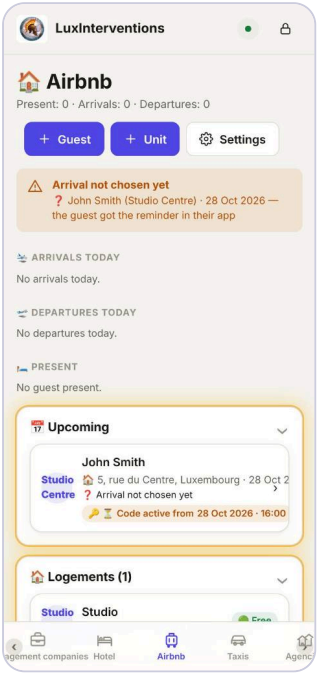

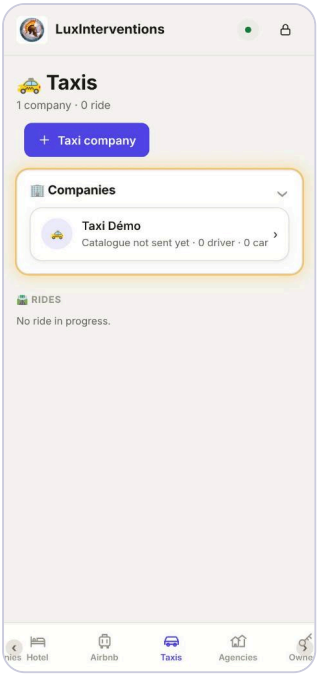

9. Airbnb

The **Airbnb** section works like the hotel, for places rented by the night: places, guests, inventories, code for the My stay app.

10. Taxis

Record your partner taxi companies. Each company receives a code for its **Taxi** app, where it manages drivers, cars and rates. When a guest asks for a taxi in My stay, the company receives the ride, accepts or refuses it, and the guest follows the arrival.

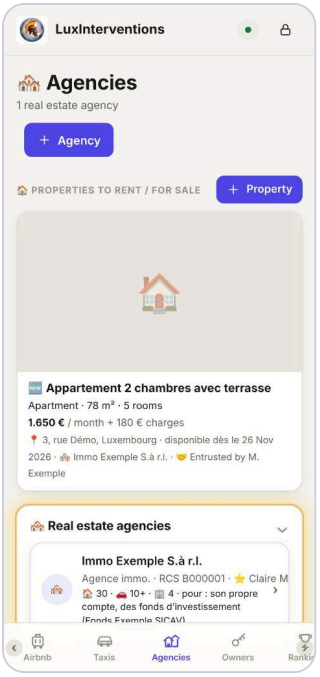

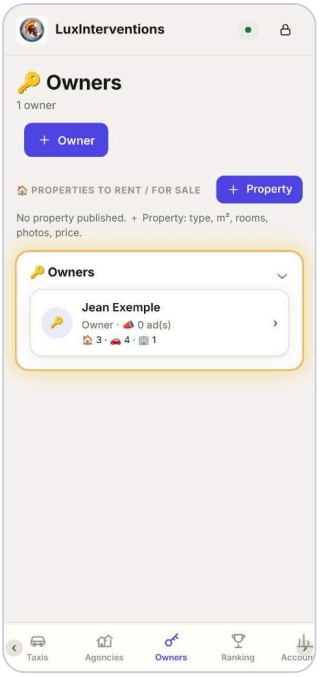

11. Agencies, owners and portfolio

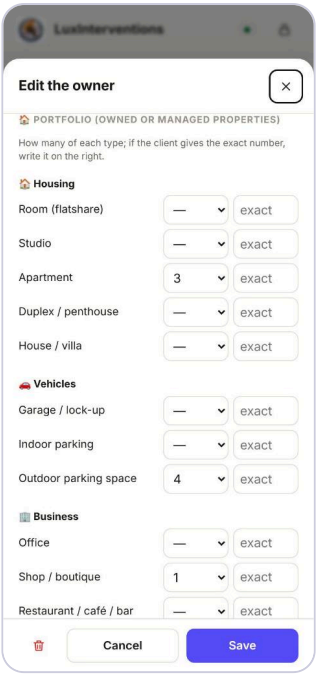

Agencies: your partner estate agencies. An agency can work **on its own account**, for **owners** or for **investment funds**.

Owners: the owners of the properties you manage.

Portfolio: in each card, give for each type of property (flats, studios, garages, parking spaces, offices, restaurants…) the quantity with the 1…10 / 10+ menu, then the exact number.

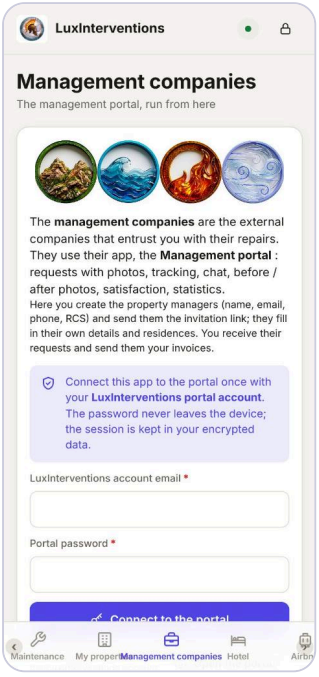

12. Management companies

The property management companies you work with: contact details, buildings, portfolio. They can also get their own central under licence.

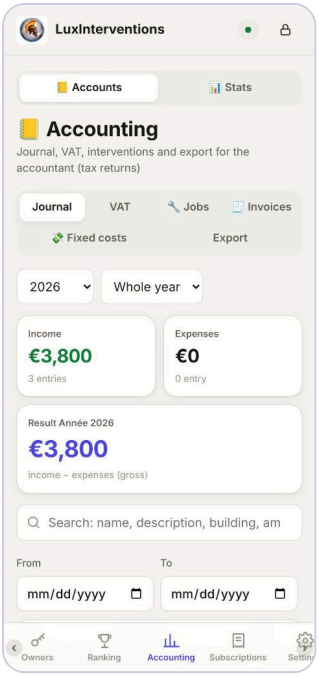

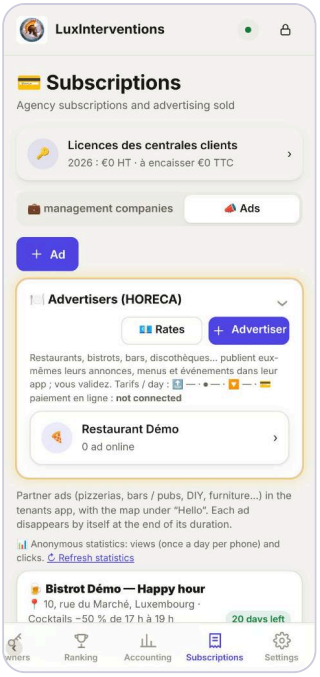

13. Accounting, subscriptions and advertisers

Accounting: income and expenses, job invoices, monthly totals.

Subscriptions: your clients' subscriptions and the **Advertisers** tab (HORECA). Create an advertiser: they get a code for the **Ads** app. Their adverts arrive here for **approval** before appearing in the apps.

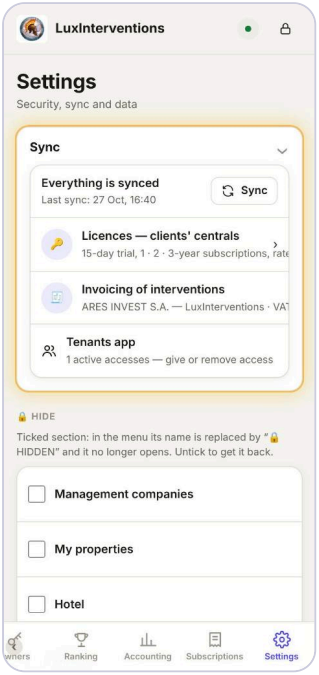

Online payment is not connected yet: the button is visible but shows “not connected”.

14. Settings

Language, company details, backup: **Encrypted backup** creates an .ares file readable only with your key, **Readable export** an unencrypted JSON file, **Import** loads either. Back up regularly and keep the file off the phone. This is also where the **Licences** are.

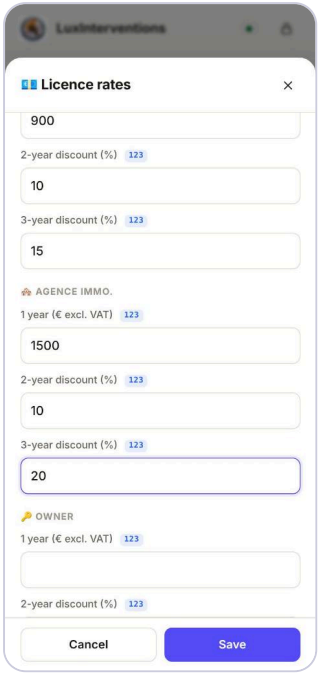

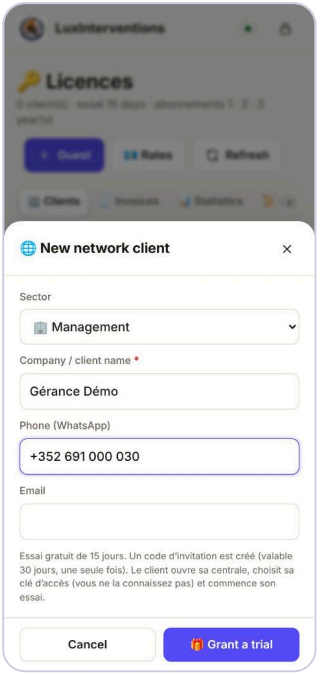

15. Licences

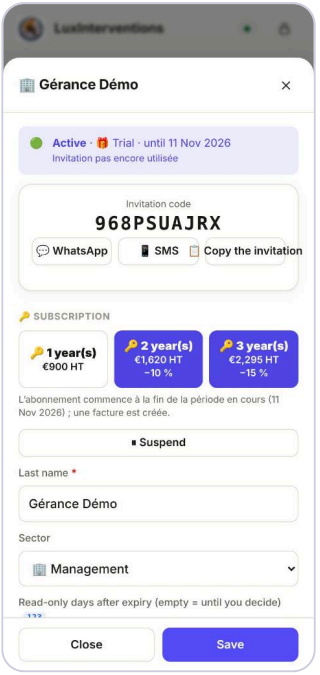

You can give your clients (management companies, agencies, owners, hotels, Airbnb) **their own central**, separate and encrypted.

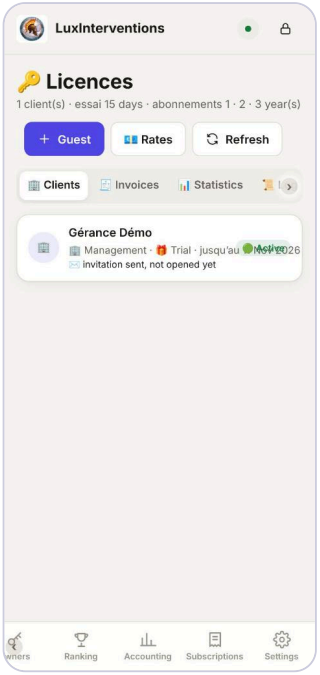

1. **Rates**: for each line of business, the price for one year and the discount for 2 and 3 years.
2. **+ Client**: line of business, name, phone. The client starts with a **fixed 15-day trial** and receives an access code.
3. In the client's card, choose the **1, 2 or 3-year** package: the price changes with the package. A PDF invoice is created, marked paid or unpaid.
4. When it expires, the client's central becomes **read-only**; you can **block** it, create new access or **delete** it (a deletion certificate is issued).

The Licences page also shows statistics, a register and CSV export.

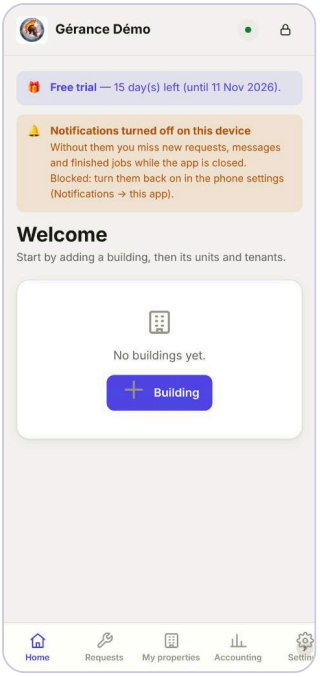

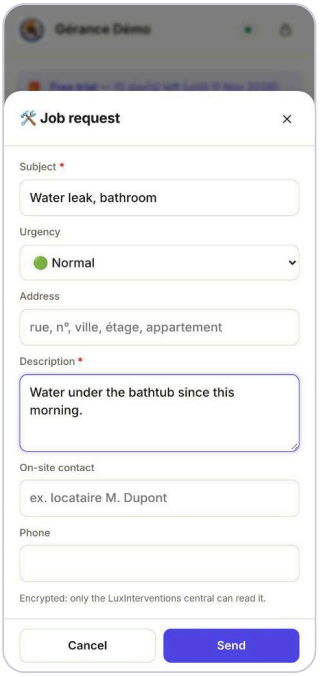

16. The client's central

The client opens their central with their code and chooses their own key. They only see the sections of their line of business, with a trial or expiry banner. They manage their properties themselves; **jobs** are still carried out by LuxInterventions: their **requests** arrive encrypted directly in your **Maintenance**.

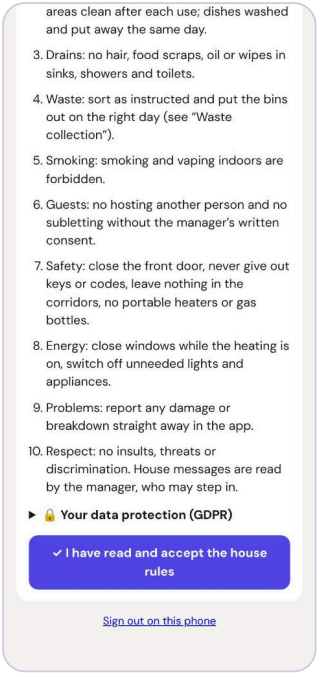

17. Tenant space app

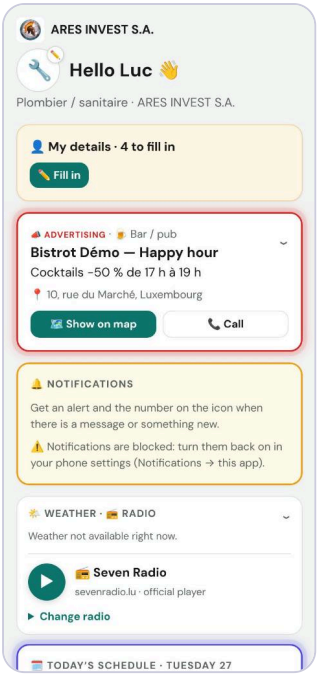

The tenant sees their home, rents and documents. They send a **repair request** with photos and follow its progress. They receive your messages and notices.

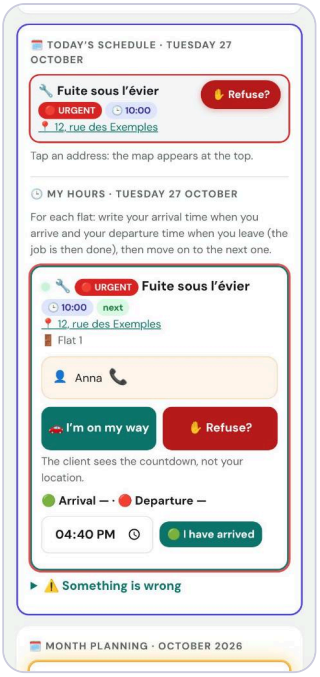

18. Team app

The technician sees today's jobs with address and route. They add before/after photos, get a signature and close the job: you see it at once in the central app.

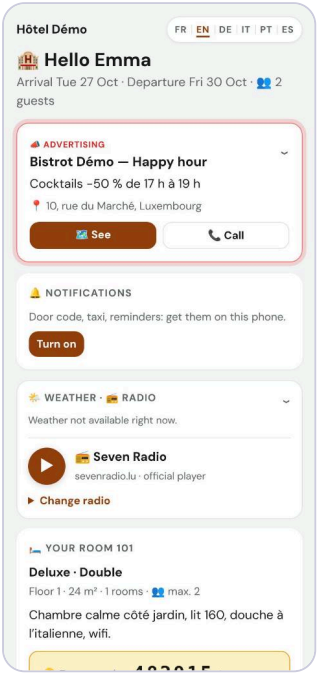

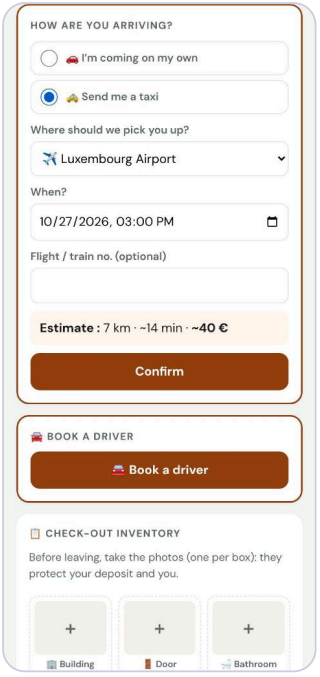

19. My stay app and driver page

The hotel or Airbnb guest opens **My stay** with their code: stay, room, services, menu, messages.

Arrival: they choose “on my own” or **taxi**. With a taxi they see the distance in km and the price in €, and follow the driver’s arrival time. During the stay they can book a driver.

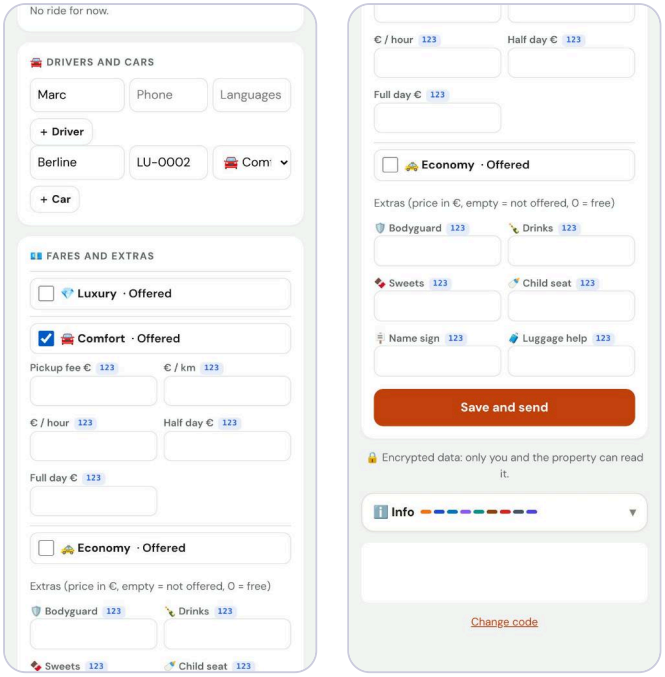

The driver receives a **link** (nothing to install): “I’m on my way”, “I’m here”, “guest on board”, “arrived”. Only the arrival time is sent, never the position.

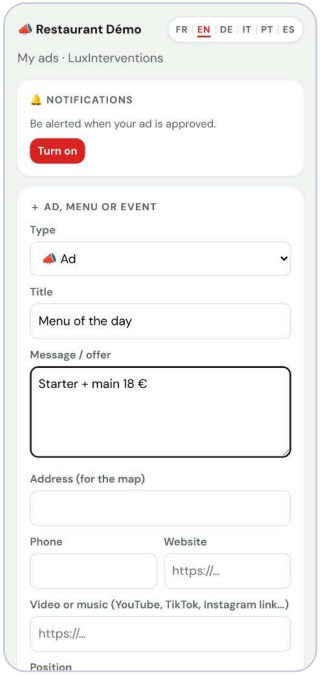

20. Taxi app

The taxi company records its **drivers** and **cars** in three classes: **luxury**, **comfort** and **eco**, with rates (pick-up, km, hour, day) and extras (meet & greet, drinks, bodyguard…). It receives rides, accepts or refuses them and assigns the driver.

21. Ads app (HORECA)

The restaurant or bar creates its **adverts**, menus and events: text, picture, days and hours, slot, target apps and price. Each advert is sent for approval to the central app before it is shown.

22. Security and good practice

- Data is encrypted on the device; your key is never sent.
- Never share your key; the other apps use their own codes, which you can replace at any time.
- Make backups (Settings → Encrypted backup) and keep them off the phone; the readable export is not encrypted.
- Only one device opens the central app: “Take over” closes the other.
